**May 2013**

## Introduction

Your child has now been assessed and is now well enough to go home. We have checked their symptoms and they seem well on the road to recovery. When you get them home it is very unlikely that they will have any further problems. If any of the following symptoms do return, you need to bring them back to their nearest hospital emergency department immediately:

- Should your child look lethargic or unwell (feeling sleepy) that goes on for longer than one hour when they would normally be wide awake
- Double vision
- Vomiting – getting sick
- Difficulty waking your child up
- Unconsciousness, or lack of full consciousness (for example, problems keeping eyes open)
- Any confusion (not knowing where they are, getting things muddled up)
- Any problems understanding or speaking
- Any loss of balance or problems walking
- Any weakness in one or more arms or legs
- Any problems with their eyesight
- Very painful headache that won't go away
- Any fits (collapsing or passing out suddenly)
- Clear fluid coming out of their ear or nose
- Bleeding from one or more ears
- New deafness in one or more ears

## Things you shouldn't worry about

Your child may feel some other symptoms over the next few days which should disappear in the next 2 weeks, these include;

- Mild headache.
- Feeling sick (without vomiting)
- Dizziness, irritability or bad temper.
- Problems concentrating or problems with their memory
- Tiredness
- Lack of appetite or problems sleeping.

If you feel very concerned about any of these symptoms in the first few days after discharge, you should take your child to their GP.

**If these problems do not go away after 2 weeks, you should bring the patient to see their GP.**

## Things that will help your child get better

### Baby (under 1's)

1. Offer milk feeds as normal (it may be of benefit to offer small frequent volumes initially to reduce risk of vomiting) and light weaning diet if your child is on solids (try to avoid rich foods).
2. Your baby should be as alert as usual and easily woken from sleep.

### Toddler

1. Offer light diet.
2. Avoid sweets and chocolate.
3. Keep your toddler as quiet as possible at home; no outdoor or vigorous play as this may result/cause vomiting.

## Long term problems

Most patients recover quickly from their accident and experience no long term problems. However, some patients only develop problems after a few weeks or months. If you start to feel that things are not quite right for your child (for example, memory problems, not feeling themselves), then please contact your GP as soon as possible so that they can check to make sure your child is recovering properly.

If you have any concerns about your child's condition please contact the Children's Unit or Children's Community Nursing Team.
