LIVER SCAN

WHAT IS A LIVER SCAN?

This is a type of nuclear medicine scan. It uses a tiny amount of radiation to look at the function of the body – in this case your liver. The Radiographer will give you a small injection of radioactivity into a vein in your arm, just like having a blood test. We will ask you to wait for about 15 minutes before the pictures are taken. Most of the radioactivity will have left your body by the next day.

WHAT ARE THE BENEFITS?

The benefit is it can show conditions that may not be seen with other procedures.

IS THERE ANY SPECIAL PREPARATION, OR INSTRUCTIONS?

You may eat and drink normally and take any medication as normal. Try to drink plenty of fluids after the scan as this will help to remove any of the remaining injection from the body.

IF YOU ARE PREGNANT OR BREAST FEEDING

If you are pregnant, or think you may be pregnant or you are breastfeeding please tell us before we give you the injection.

IS THE RADIOISOTOPE INJECTION DANGEROUS?

We are all exposed to small amounts of radiation from the atmosphere throughout our lives. Any amount of diagnostic radiation can add slightly to the normal risk of developing cancer. In all our examinations the amount of radiation is kept to the minimum so the added risk from this test is very small indeed. Your body will

eliminate the radiation quickly and naturally via your kidneys. However, please avoid prolonged close contact with children and pregnant women on the day of the scan. This is to avoid exposing them to unnecessary radiation.

WHAT HAPPENS DURING THE TEST?

You will not be required to undress for the scan apart from removing outdoor clothing and metallic objects such as keys, coins and buckles. You will be asked to lie on the scan table, the Radiographer will position the scanner over your abdomen and pictures will be taken for about 20 minutes. The scanner does not cover your head and it is not like a long tunnel. You will not be sedated at all and you can use your usual form of transport.

HOW DO I RECEIVE THE RESULTS OF MY SCAN?

The results will be sent to the doctor who referred you for this examination and you can discuss the report with them when you next visit. An appointment will be sent to you if you came as an outpatient. If your GP sent you, you need to make an appointment to see them about two weeks after the examination.

WHO SHOULD I CONTACT IF I HAVE ANY QUESTIONS?

You can contact the Nuclear Medicine Department on 0161-922-6605 during the hours of 9.00am to 5pm Monday to Friday. Alternatively, write your questions in this space below and bring this with you when you attend for your scan.

ALTERNATIVES

Your doctor has decided that this is the appropriate examination to investigate your condition. Any alternatives should have already been discussed with you.
