

Discharge Advice: Following attendance with Base of 5th Metatarsal Fracture

Patient information Leaflet

July 2020

- You have fractured a bone on the outer part of your foot.
- The fracture has occurred in a part of the bone which normally heals.
- The pain, tenderness and swelling you are experiencing in the foot should gradually settle over a period of several weeks.
- During this time, you may find walking on the foot painful – it may help to walk on the heel initially.
- You will be provided with a support for the foot in the form of bandaging or a removable boot. If required, you will also be provided with crutches.
- You may walk on the foot as much as pain allows and if you have been given a boot, you should gradually discard it over 3-5 weeks as the pain settles (the boot allows a greater level of mobility, making it more comfortable and convenient than traditional plaster casts).
- Most injuries heal – however it may take several months for your symptoms to settle completely.
- Occasionally the fracture may fail to heal and continue to be painful, even after several months. A surgical procedure may be needed at this stage to help heal the fracture
- If you are still experiencing significant symptoms after several months, please phone the fracture clinic helpline as listed below for further advice

Should you have any worries or concerns following discharge from hospital, please contact:

1. Virtual Fracture Clinic Answer phone: 0161 922 4006

(Please leave a message and your call be returned)

Direct Line 0161 922 4547
